- Transport 15-minute walk from Musashi-Yamato (Seibu-Tamako line)  
5-minute walk from Shioyama-Jinja bus stop on Seibu Bus (Tachikawa, JR line to Higashi-Murayama, Seibu line)

Higashiyamato Park, located south of Tama Lake, may look monotonous at first sight. However, it is filled with hidden charms such as the Japanese red pines on a slightly elevated hill, orange surprise lily blooming in orange in the small valley, and clethra and hosta lining the park path. From 1970 to 1974, there was a plan to develop apartment complexes. Numerous citizens rallied with the city of Higashi-Yamato to persuade the Tokyo government to protect their wild woodlands. These efforts paid off and led to Tokyo's first municipal hillside park. Since then, many people have been involved in the preservation of the woodlands. Citizen's groups have conducted ongoing nature observations and vegetation studies for many years now, and continue to take an active role in caring for the groves while exchanging opinions with park administrators.

Tree groves

## Sensing area

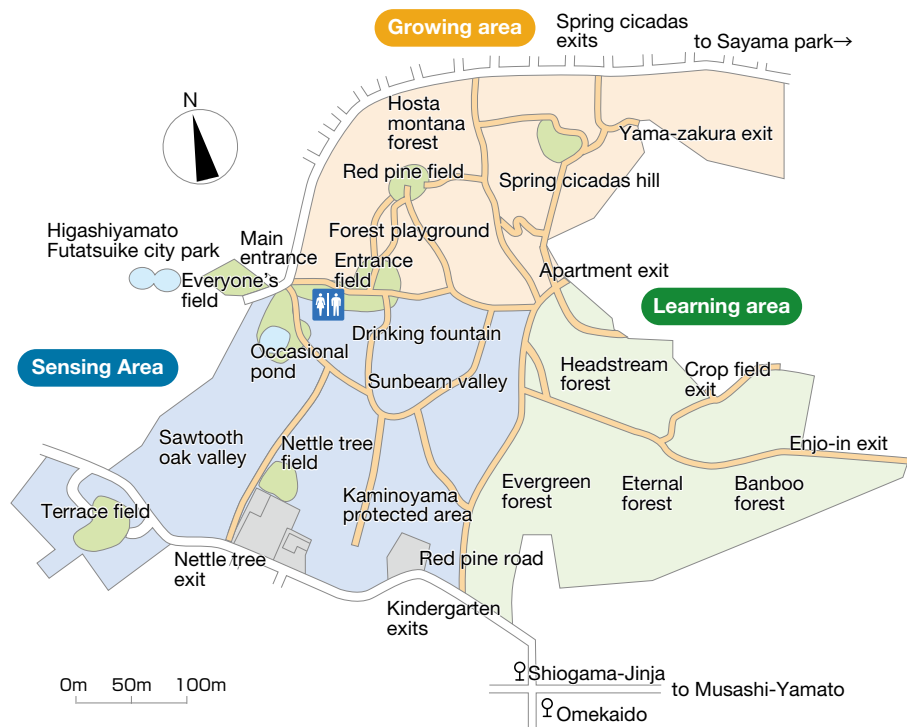

See various plants and creatures in the environment that vary from calm sunbeam valley to bright grass field around the occasional ponds. It is an area where you can sense the beauty of forests.

## Learning area

There are various forests such as main-tained bright refreshing headstream forest, untouched eternal forest, evergreen forest, and bamboo forest. You can also learn about the relation between forest and mankind in this area.

## Growing area

Red pine, lymonia, clethraceae, and other flowers and trees can be seen in the red pine field and spring cicadas hill. Wild plants such as Asian fawnlily, Cephalanthera erecta, and hosta can be found on the forest floor. It is an area where many citizens treasure.
